Exceptions are indicated by an explicit note. IMPORTANT: This sequence is not the entire insert of clone T28A8. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (09-MAR-1997) Nematode Sequencing Project, Sanger Institute, Hinxton, Cambridge CB10 1SA, England and Department of Genetics, Washington University, St. Louis, MO 63110, USA. as compressions and repeats; from more than one subclone; restriction digest all regions were covered by sequence and the assembly was confirmed by

MAPPING INFORMATION:

sequence, see http://genome.wustl.edu/gsc Mapping information for this clone was provided by Dr. John D McPherson, Department of Genetics, Washington University, St. MO. For additional information about the map position of this ō Louis

SOURCE INFORMATION:

donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frenteteno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome Research Genetics, Inc. (http://www.roand.org The RPCIibraries. pBACe3.6 Genomics 51:1-8. The clone may be obtained either human BAC library was made from the blood of one male (http://www.resgen.com) or Pieter Zhao, B., Frengen, E. de Jong from

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP11-25B14, 2000 bp overlap.
Actual start of this clone is at base position 1 of RP11-603P13;
actual end is at base position 101783 of RP11-25B14.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded or sequenced with an alternate chemistry; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was by restriction digest.

Project (Eric D: Green, Director), John D. McPhe Department of Genetics (Washington University), University Genome Sequencing Center. For additiabout the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genc MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping. Project (Eric D: Green, Director), John D. McPherson in the Department of Genetics (Mashington University), and the Washington Trainersity Genome Sequencing Center. For additional information

see http://genome.wustl.edu/gsc

# SOURCE INFORMATION:

NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is RP4-537J23. Actual start of this clone is at base position of 1 of RP4-724E13; actual end is 115045 of RP4-724E13. This clone was derived from human PAC library RPCI-4, prepared by Pleter de Jong and coworkers at Roswell Park Cancer Institute, using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor. For further details, see http://bacpac.med.buffalo.edu/
The clone is available from Genome Systems, Inc. (http://www.genomesystems.com).

Chemistry: Dye-terminator Big Dye: 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 96476 bases at least Q40
Consensus quality: 99583 bases at least Q30
Consensus quality: 101766 bases at least Q30

**NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

**NOTE: This is a 'working draft' sequence. It currently
consists of 29 contigs. The true order of the pieces
is not known and their order in this sequence record is
runs of N, but the exact sizes of the gaps are unknown.

**This record will be updated with the finished sequence
be preserved.

1038: contig of 1038 bp in length
1138: gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORWPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 mapping Group. Further information can be found at http://www.sanger.ac.uk/Projects/Control Control                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human DNA sequence from clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is the entire insert of clone RP11-512M17 The true left end of clone RP11-545P6 is at 121889 in this sequence. The true right end of clone RP11-315A9 is at 159267 in this sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               On Nov 23, 2000 this sequence version replaced gi:11321907.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C member; of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the Lasses of oligomers, the degree of methylation is calculated to the two classes of oligomers, the degree of methylation is calculated. The method classes of oligomers, the degree of methylation is calculated. The method classes of oligomers, the degree of methylation is calculated. The method classes of oligomers, the degree of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide types and for investigating cell differentiation of cell or tissue methylation status of many C residues to be determined simultaneously. C methylation status of many C residues to be determined simultaneously. C method [for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

CC Cytosine (C) but not methylated C, to uracil, then part or the yellowing (C) but not methylated C, to uracil, then part or the yellowing (C) but not methylated C, to uracil, then part or the yellowing (C) but that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one contains the provide of the yellowing contains the provide of the yellowing contains the cardior peptide-nucleic acid (PNA) oligomers and the degree of hybridised to the two classes of oligomers, the degree of methylation is calculated. The method CC classes of oligomers, the degree of methylation is calculated. The method CC is used: (i) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue CC methylation status of many C residues to be determined simultaneously.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C-residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in .
                                                                                         Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           methylation of a particular cytosine in a motif 5' CpG-3', pre
genomic sample of DNA. The sample is treated chemically to con
cytosine (C) but not methylated C, to uracil, then part of the
DNA that contains the target C is amplified to form a labeled

This invention describes a novel method for determining the degree methylation of a particular cytosine in a motif 5'-CpG-3', present genomic sample of DNA. The sample is treated chemically to convert

in

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DNA that contains the target C is amplified to form a labeled amplicon. CC The amplicon is hybridised to two classes, each with at least one comments of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory cystems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation. The method allows the methylation status of many C residues to be determined simultaneously. CC ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method of contenting the degree of cytosine methylation described in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                       The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes, for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

DNA having the genetic information of urea amidolyase originated from Saccharomyces yeast - can be used to prepare high purity urea amidolyase by culturing the transformant comprising the DNA Claim 1; Page 10-17; 17pp; Japanese.

WPI; 1993-338925/43. P-PSDB; AAR42839: (TOYM ) TOYOBO KK.

This sequence encodes a protein which has urea amidolyase (URL)-activity and is derived from yeast. This sequence may be used within a recombinant plasmid for the production of highly pure URL.

Sequence 6265 BP; 1873 A; 1156 C; 1361 G; 1875 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC Prophonibacterium acroes immunogenic polypeptides. The proteins and their cdiagnosis of medical conditions caused by P. acroes. The disorders include SAPHO syndrome (synovitis, acroe, pustulosis, hypertosis and content syndrome (synovitis, acroe, pustulosis, hypertosis and content syndrome (synovitis, acroe, pustulosis, hypertosis and content syndrome (synovitis, acroe, pustulosis, hypertosis and content syndrome (synovitis, acroe, pustulosis, hypertosis and content syndrome (synovitis, acroe, pustulosis, hypertosis and system, however it is particularly involved in the inflammatory lesions associated with acroe culgaris. A method for detecting the presence or absence of P. acroes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acroes proteins. These antibodies can be used to downregulate expression and activity of P. acroes polypeptides and therefore treat P. acroes infections. The antibodies may also be used as considered to treat P. acroes in a cristian. This sequence encodes the college shown in ANUS-556-ANUS-4928 and ANUS-756-ANUS-622.

cc and antiinfective activity, and may also be involved in the determination co of bodily characteristics, fertility and behaviour. ORFX proteins, curuleic acids and antibodies may be used in the treatment of cancers, cc other proliferative disorders such as psoriasis and benign tumours, careful disorders such as perial and benign tumours, concerning the concerning termination of cancers, disorders, disorders, disorders, disorders, disorders, disorders, disorders, concerning transplantation, disorders of tissue growth and regeneration, cc diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester concerning the party of the concerning transplantation. ORFX nucleic acids may also be used as a source of primers and probes, in the detection of ORFX genomic sequences or transcripts, in the identification and cloning of homologous course. In genetic diagnosis, and in forensis biology. The ORFX nucleic acids may additionally be used to produce transgenic animals which may be useful for studying the function and/or activity. Of ORFX concerning and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the concerning of the diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activity, and methods of screening individuals for a predisposition to offer associated disorder. The ORFX proteins of the invention have a wid range of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopolesis regulation, cell differentiation, immune modulation, haematopolesis regulation, cell differentiation, immune modulation, haematopolesis regulation, clisue growth, angiogenesis, activin or inhibin activity, chemotactic chemokinetic activity, haemostactic activity, thrombolytic activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity, receptor/ligand, antiinflammatory activity, tumour inhibition activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    specific for ORFX proteins, methods of detecting ORFX polynucleotides and polypeptides, methods of screening for modulators of ORFX expression or activity, and methods of screening individuals for a predisposition to an ORFX-associated disorder. The ORFX proteins of the invention have a wide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        designated ORF (open reading frame) 1-4534, and sequences ABN75054-BBN75587 represent cDNAs encoding them. The invention also encompasses polypeptides at least 80% identical to the ORF1-ORF4534 (collectively referred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX polynucleotides, the recombinant production of ORFX proteins, antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Leach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for isolating a polynucleotide of interest that is present or is expressed in a genome of a first mycobacterium strain and that is absent or altered in a genome of a using a bacterial artificial chromosome (BAC) vector. Recombinant BAC vectors, which are preferably immobilised, can be used to detect mycobacterial nucleic acids (genomic DNA, CDNA or mRNA) in biological for detecting a given mycobacterium of interest. By aligning the polynucleotides contained in the recombinant BAC vectors it is possible
                                                                                                                                                                                                                                                                            are useful in providing information for combating tuberculosis. It is possible to compare genomes between different strains or species and their non-pathogenic strains or species counterparts. ABQ62492 to ABB61228 and ABB81227 to ABB81230 represent sequences used in the
                                                                                                                                                                                                                                              Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is used: (1) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (11) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                       DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligoners and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligoners, the degree of methylation is calculated. The metho is used: (1) for diagnosis and/or progness of classes of oligoners.
                                                                                                                                                                                                                                                                                                                                 methylation of a particular cytosine in a motif 5'-CpG-3 genomic sample of DNA. The sample is treated chemically cytosine (C) but not methylated C, to uracil, then part
                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method for determining the degree methylation of a particular cytosine in a motif 5'-cpg-3', present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (pNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of the central nervous, cardiovascular, quastrointestinal and recriments.
                                                                                                                                                                                                                                                                                                                                                                                                               of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel method for determining tmethylation of a particular cytosine in a motif 5' CpG-3' genomic sample of DNA. The sample is treated chemically t cytosine (C) but not methylated C, to uracil, then part of the cytosine (C) but not methylated C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA
                                     Human ORFX polynucleotide sequence SEQ ID NO:17701

ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel human polypeptides and polynucleotides useful for preventing and treating cardiovascular disease, neurodec hyperproliferative disorders and autoimmune disorders
                                                                    N.B. The sequence data for this patent did not form specification, but was obtained in electronic format
                                                                                                                                                                              reperfusion injury in various tissues and conditions resulting systemic cytokine damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-MAY-2000; 2000US-206132P
